

SEMI-ANNUAL STATUS REPORT OF THE **CANADIAN NUCLEAR**
FUEL WASTE MANAGEMENT PROGRAM
1993 April 1 - September 30

compiled by

E.D. Wright

ABSTRACT

This report is the fifteenth in a series of semi-annual status reports on the research and development program for the safe management and disposal of Canada's nuclear fuel waste. It describes the progress achieved in the three major subprograms, engineered systems, natural systems and performance assessment, from 1993 April 1 to September 30. It also gives a brief description of the activities being carried out in preparation for the public and governmental review of the disposal concept.

Since 1987 this program has been jointly funded by AECL and Ontario Hydro under the auspices of the CANDU Owners Group (COG).
